

2023 Aortic Aneurysm and Dissection

2023 ICD-10-CM Conventions and Guidelines Changes

Updated ICD-10-CM Guidelines are available for use on October 1, 2022.

ICD-10-CM guidelines are used to classify diagnoses, morbidities, and reasons for patient visits.

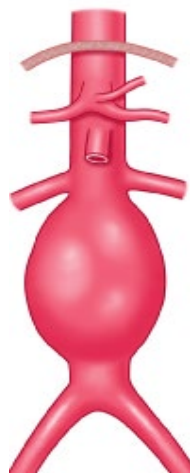

Several new codes have been added to category I71. These new codes describe the anatomy involved for thoracic, abdominal, and thoracoabdominal aortic aneurysms with or without rupture.

Patient care is directly related to the site of the disease including medical and surgical intervention, risk of adverse events, and overall resources involved.

Tips:

- Review the medical record for documentation or clinical evidence indicating the aortic aneurysm is (possibly) related to syphilis or traumatic injury or associated with a condition.
- ICD-10-CM guidelines state, *"The assignment of a diagnosis code is based on the provider's diagnostic statement that the condition exists."* If provider documentation does not support the assignment of a diagnosis but clinical information is present, a query may be submitted.

Juxtarenal AAA

OF NOTE

Juxtarenal abdominal aortic aneurysms involve the infrarenal abdominal aorta adjacent to or including the lower margin of renal artery origins.
